

A photograph of two men standing in a field of solar panels. The man on the left is wearing a white shirt, a black vest, and an orange safety vest, and is pointing towards the right. The man on the right is wearing a grey blazer and brown trousers, and is looking towards the left. The solar panels are arranged in rows, and the background shows a line of trees under a cloudy sky.

Bringing technology together
to enable global energy transformation

We believe integrated technology is the path to a sustainable future

AZZO was founded in 2005 by John Azzollini in Adelaide, South Australia within the industrial automation sector. In 2008, James DiLiberto was brought in from New York City as a passionate, visionary engineer to forge new pathways in power monitoring. Through their forward thinking, these partners transitioned the company from the automation and management of electrical systems to a fresh focus on energy efficiency, renewables and sustainability. John and James have since led the expansion of AZZO into many of the metro areas of Australia and the USA. The theme of bringing together both people and technology, in digital and electrical fields, has been the key to AZZO's broad success across many segments.

“ The team at AZZO continually displays a very high level of professionalism, technical understanding, quality assurance processes, and documentation. Their team is very responsive to questions as they are raised, and they have proved time and again the importance of customer service and satisfaction. ”

LEE MRNJAVAC
Country Manager,
RWE Renewables Australia

Our core competencies

AZZO pursues excellence in four core competencies: Power Automation, Energy Management, Electrical Engineering and Digital Systems. Our recent certification for the ISO 27001 Cybersecurity Standard is an important milestone in our Digital Systems competency. Harnessing synergies between these disciplines has allowed us to deliver consistently successful business and sustainability outcomes for customers.

Our solutions

Around the world, AZZO delivers advanced energy management solutions across a variety of segments. Our solutions help customers maximize the performance of their investments in an energy ecosystem, whether deploying renewable generation, HVAC upgrades or mitigating power quality issues.

Our customers often tackle multiple energy objectives. For example, after installing and managing an EV charging fleet, the focus may shift to improving efficiency of HVAC systems or tracking energy costs across departments. Later, power reliability may become a priority due to the increase in digital electrical loading at a facility. AZZO's solutions cover these applications and more, enabling customers to maintain a clear line-of-sight to their business outcomes along the way.

Beyond these core benefits, AZZO solutions can provide customers with access to new revenue streams from participating in energy and ancillary services markets. We can also help them strengthen their brand equity and access new funding sources by achieving compliance with sustainability standards such as LEED and NABERS.

For some customers, power resiliency and availability are business priorities, in order to reduce downtime, equipment damage and maintenance costs. AZZO's power quality and electrical distribution SCADA solutions can deliver these reliability outcomes, integrating seamlessly with existing solutions.

As our customers' energy transformation ambitions evolve, no matter which direction they take, AZZO is the trusted advisor with a proven track record to help unlock the full potential of their energy ecosystem.

The EnergyX™ factor

AZZO's EnergyX IoT platform brings technology together with Schneider Electric EcoStruxure and Microsoft Azure platforms to create a truly unique set of energy management capabilities. EnergyX is designed to scale from basic energy management to advanced applications including DER fleet management, complex site control and power quality mitigation. We also provide tailored services over the lifecycle of many energy management initiatives - from conceptualization to design, commissioning, operation, and support.
